Booth Lake Landing Only AIS Monitoring Report

WBIC: 1537800
Previous AIS Findings: Chinese Mystery Snail, Narrow leaf Cattail, Purple Loosestrife, Rusty Crawfish
New AIS Findings: None
Field Date: August 19th, 2017
Field Crew: Thomas Boisvert, AIS Project Assistant, Oneida County Land and Water Conservation Department
Report by: Thomas Boisvert

On August 19th, 2017, Thomas Boisvert, AIS Project Assistant, headed to Booth Lake to perform an AIS landing check. The main duties performed at AIS landing checks are to inspect shoreline vegetation, shallow aquatic vegetation, deeper aquatic vegetation (via rake), to look for invasive animals, and replace old signs if needed. Monitoring is conducted at the boat landing, and a 100-150 foot stretch on both sides of the landing's surrounding shoreline.

Booth Lake is located in Oneida County, WI, and has one public boat landing. This public boat landing can be found down Forest Lane, off of Booth Lake Road. The shoreline near the landing is almost entirely muck, however, it still holds a variety of native plants.

Booth Lake is 204 acres and already contains several invasive species. According to the WDNR, Chinese Mystery Snails, Narrow Leaf Cattail, Purple Loosestrife, and Rusty Crawfish are already present on this waterbody. Luckily, when conducting the AIS landing check, no new invasive species were found, however, Chinese Mystery Snails were seen in copious amounts.

Findings:

Aquatic Invasive Species:

No new invasive species were found.
